Research Project

2017 - Current Synthesis, characterization of titanium oxide nanocrystals and application in thin films used as gas sensor elements

Description: Based on the innovations proposed by nanotechnology, this project aims to develop gas sensor elements with thin films of titanium oxide nanocrystals, evaluating the impact of the solvent used in the solvothermal synthesis, in the structure of nanocrystals and in the response of the sensor elements.
Status: In progress Category: Projetos de pesquisa
Students: Undergraduate (1); Ph.D. (1);
